

Software Engineering

TRISTAR provides full life cycle software engineering services to the most diverse and demanding organizations maximizing return on investment and customer satisfaction

- Leading technologies, methodologies and industry recognized best practices
- Agile and traditional frameworks
- Successfully delivering high-value, scalable solutions
- On-time products/services
- Embedded systems, web applications, mobile development, and cloud-based solutions

Application Development

TRISTAR provides application development services across the application spectrum including web, mobile, and backend capability.

- › Development practices are based on traditional and Agile frameworks, CMMI® processes, and customer feedback.
- › On and off-site support during all phases of the application development lifecycle.
- › Identification, design, and implementation of software technologies.

- › Meeting budget, schedule, and other constraints while managing risk.
- › Expertise includes Open Source, Java, Microsoft, Oracle, IBM, Apple, Adobe, and SAP.

Enterprise Agility

TRISTAR's approach to enterprise agility maximizes the benefits of Agile development

- › Aligns the functional business resources to bring development needs to the forefront.
- › Increased visibility and transparency into execution and enhanced planning

DevOps

TRISTAR helps organizations increase customer delivery through a variety of processes and tools.

- › Automate the development and operational environment
- › Quality assurance, test, and deployment processes are made more efficient, repeatable, predictable, and secure.
- › Promote collaboration and communication through the entire software development life cycle.
- › Accommodates rapid capability deployment in a secure fashion.
